DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1, 4-11, and 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Siegel 4,732,411 in view of Kutsuma 5,905,652.

Siegel teaches using a label having a miniature photograph of the patient on a prescription container. Siegel teaches that the picture is taken of the patient and then stored in computer memory so that it can be produced on demand. See the abstract; figure 1; col. 2, lines 1-64; col. 3, lines 1-66; and claim 1.

Siegel however does not specifically state that two computers can be used; that databases are used or that a digital camera is used.

Kutsuma teaches the use of a digital camera; inputting a picture into a computer; transmitting a picture from one computer to another computer and combining the picture with other prescription information and printing the combined information. Kutsuma also teaches storing the picture and prescription information in separate memories which form databases. Kutsuma also teaches that if the required picture is not stored in memory taking a picture and storing the picture in memory. See fig. 6; col. 4, lines 26-48; col. 6, lines 13-27.

It would have been obvious to one of ordinary skill in the art to modify Siegel in view of Kutsuma to use a printer, camera, databases, and multiple computers as taught by Kutsuma to produce a label with a patient picture and other information such as medication pictures and prescription information. This would allow printing a label at various locations in case a printer fails or sending the information to different pharmacies and insure the correct patient receives the correct medications.

4. Applicant's arguments with respect to claims 1,4-11, and 14-20 have been considered but are moot in view of the new ground(s) of rejection.
